1. Main Roads WA classification of standard RAV vehicles

Main Roads WA - Standard Restricted Access Vehicle (RAV) Route Assessment Guidelines outline the steps for assessing the suitability of routes proposed for the operation of “standard” Restricted Access Vehicles (RAVs).

On 25 September 2019 Austroads announced results of the research concerning expansion of allowed RAV vehicle width from 2.5m to 2.55m. The report also indicated that expansion to 2.6m is possible in future. Main Roads WA have not commented on this as at writing of the report.

Standard width of the RAV vehicle will not exceed 2.5m while standard height will not exceed 4.6m. Standard RAVs are those vehicle combinations specified as Category 1 to 10 vehicle combinations under the Prime Mover, Trailer Combinations and Truck, Trailer Combinations Notice.

The standard RAV Categories have been grouped into four (4) assessment levels, as follows:

- Level 1 - RAVs Categories 2-4 (e.g. pocket road train, B-Double, and other RAVs with a maximum length of either 25.0 m or 27.5 m);
- Level 2 - RAVs Categories 5-6 (e.g. RAVs with a maximum length of 36.5 m and a maximum mass of 87.5T);
- Level 3 - RAVs Categories 7-8 (e.g. RAVs with a maximum length of 36.5 m and a maximum mass of 107.5T); and
- Level 4 - RAVs Categories 9-10 (e.g. RAVs with a maximum length of 53.5 m).

Road being assessed for a Tri-drive Restricted Access Vehicle (RAV) Network is required to meet the requirements under the Standard Restricted Access Vehicle (RAV) Route Assessment Guidelines, with the exception of the structures assessments, gradient assessments and swept path assessments, which must be assessed in accordance with these Tri-drive Route Assessment Guidelines. Generally speaking, if a road meets the requirements for a Tri-drive RAV Network, it will meet the requirements for a Standard RAV Network (i.e. RAV Networks 1 to 10).

The Tri – drive RAV Categories have been grouped as follows:

- Level 1 – Tri Dive RAV Category 1 (e.g. a vehicle that would otherwise be a general access vehicle if it was tandem drive, this category has access to the tandem drive RAV Network 2)
- Level 2 – Tri Drive RAV Category 2 (e.g. RAVs with a maximum length of 25.0 metres).
- Level 3 – Tri drive RAV Category 3 (e.g. RAVs with a maximum length of 27.5 metres).
- Level 4 – Tri drive RAV Category 4 (e.g. RAVs with a maximum length of 36.5 metres).
- Level 5 – Tri drive RAV Category 5 (e.g. RAVs with a maximum length of 53.5 metres).

An application for concessional loading road access must not be considered unless the requested road is already approved on the equivalent base RAV Network. The quantitative limits recommended provide additional safety margins for concessionally loaded RAVs, as the extra mass has a considerable impact on the vehicles performance characteristics. For this reason, additional road width, stopping distances etc. are required.

Concessionally loaded RAVs are grouped in the following categories:

- Level 1 - RAVs operating under a concessional loading scheme allowing up to 17 tonnes on a tandem axle group and 21.5 tonnes on a tri axle group.
- Level 2 – RAVs operating under a concessional loading scheme allowing up to 17 tonnes on a tandem axle group and 22.5 tonnes on a tri axle group.
- Level 3 – RAVs operating under a concessional loading scheme allowing up to 17.5 tonnes on a tandem axle group and 23.5 tonnes on a tri axle group.
- Level 4 – RAVs operating under other concessional loading schemes.
